# *A Warning is given Customers against so-called offers of Cheap Fruit Trees.*

---

When you have cleared and prepared your land ready for the orchard, the next most important matter is the selection of the FRUIT TREES to be planted. This is of vital importance, as your success as an orchardist depends on it.

*GROWERS! Do you realize what  
this means?—Your Livelihood!*

QUALITY FIRST.—In planting trees, the best quality only should be used. You may save a few shillings per dozen trees at the time of purchase, but if the trees prove not what you wanted, and are worthless when brought to fruition, which means at least three years of your valuable time, what have you saved then?

We maintain, trees to be sold cheaply, must be produced cheaply. This means the quality is allowed to drop, by not giving the trees enough cultivation, and the careful attention that is required to produce quality trees. Poor specimen trees when planted never become large and healthy or bear prolific crops of fruit.

---

*Is it not far better to give a Fair Price,  
and as far as the trees are concerned, have  
your success assured?*

## Alteration of Prices.

OWING to the enormous increase in the cost of producing High-Grade Fruit Trees during the last few years, it is now impossible to put the same individual care and attention into each tree for the previous price. This can be overcome in two ways only—**Firstly**, keep the quality up and charge enough to cover the extra cost; or **Secondly**, allow the quality to drop, or, in other words, give the trees less expert attention in the nursery beds. It is beside the question for us to grow anything but the **Highest Quality Trees**, and to do this it is therefore necessary to revise the former prices to the following:—

|                                                                                                                                                 | 100<br>RATE | DOZ.<br>RATE | EACH<br>RATE |
|-------------------------------------------------------------------------------------------------------------------------------------------------|-------------|--------------|--------------|
| Apples on Northern Spy Stock, Pears, Plums, }<br>Almonds, Apricots, Peaches, Prunes, Japanese }<br>Plums, Figs, Cherries, Quinces, Nectarines } | 100/-       | 15/-         | 1/6          |
| Apples on Dwarf Stock... ..                                                                                                                     | —           | 24/-         | 2/6          |
| Walnuts, common ... ..                                                                                                                          | 100/-       | 15/-         | 1/6          |
| „ other varieties ... ..                                                                                                                        | —           | —            | 3/-          |

## Certificate of Examination

*I hereby Certify* that the under-mentioned Trees and Plants in the Nurseries, the property of

MESSRS. JOHN BRUNNING & SONS,  
of Somerville,

have this day been examined and found free from disease. This Certificate is granted for a period of six months from date hereof, unless rescinded upon further examination, in accordance with Clause 3 of the General Regulations under the above Act.

Dated the 12th day of May, 1920,

ARTHUR JONES,  
Inspector.

# Introduction

In presenting this season's Catalog, we desire to thank our Customers and friends for the liberal support they have given us during the past seasons. We also trust by giving careful attention to business and by placing the goods at the lowest price, consistent with good quality, to still uphold the confidence and support given us.

The "SOMERVILLE NURSERIES" are so well and favourably known throughout Australia, Tasmania, and New Zealand, and through merit they are now making a creditable record of their productions, where soil and climate are favourable to fruit-growing, that it is needless to go into detailed account of how the Nurseries have grown to their present dimensions.

The Nurseries have been established for **54** years, and are situated at Somerville, on the Stony Point Line, 34 miles from Melbourne. Visitors and intending planters are cordially invited to come at any time and we will be most happy to show them over the Orchards and Nurseries. If word is sent beforehand, they will be met at the station with conveyance, and thereby saved a walk of  $1\frac{3}{4}$  miles.

---

---

## PACKING.

**We specialise in this department, having a Special Staff doing this all the season, and can guarantee to pack to carry anywhere, whether by boat or rail**

---

---

Amateurs unacquainted with the different varieties should state for what purpose the fruit is required, the nature of the soil, situation, etc., then if the selection is left to us, we will send the trees best suited to those purposes and conditions.

Some of your friends may be interested in orcharding. Would they like a Catalog? It is a pleasure for us to send them one if you will let us know.

# Hints to Customers.

**C**USTOMERS are requested to kindly state clearly which route they wish the Goods sent, and also write distinctly their names and addresses.

Unknown correspondents will kindly furnish a Melbourne reference.

Cheques, Money Orders, etc., payable to John Brunning & Sons.

Customers are specially requested to order at once, if possible, after receiving our reply to their enquiries, as delay may cause trouble, and we do not hold any sorts unless distinctly ordered.

Customers are kindly requested to add a few more names to their lists, as it is impossible to keep all sorts in stock, but in no case will the supplementary list be made use of where the other can possibly be supplied.

Customers are kindly asked to state whether the railway station to which they want the goods consigned is prepaid or not.

**Responsibility.**—Our responsibility of damages of any kind, such as rough usage, pilfering, loss during transit, etc., cease when the goods are delivered at the Somerville Railway Station or at the Melbourne Wharves.

Customers are kindly requested when ordering to state whether they should be addressed as Mr., Mrs., or Miss.

**All Post Office Orders payable at Somerville.**

# Cross Fertilisation.

**I**T has been proved now that certain sorts of Apples and Pears require other varieties planted near to fertilise them. In

Apples, it has been proved that Jonathan will not set its fruit unless other varieties are planted near it. In planting large numbers of Jonathans, we would recommend that every fourth and eleventh rows should be planted with the sort required for fertilisation purposes.

| 1 | 2 | 3 | 4                                 | 5 | 6 | 7 | 8 | 9 | 10 | 11                                | 12 | 13 | 14 |
|---|---|---|-----------------------------------|---|---|---|---|---|----|-----------------------------------|----|----|----|
|   |   |   | Row cross fertilisation purposes. |   |   |   |   |   |    | Row cross fertilisation purposes. |    |    |    |

The sorts we would recommend to fertilise Jonathan are Rymer, Stone Pippin, Reinette du Canada, Alfriston, Chandler, Sturmer Pippin, Munro's Favorite.

In Pears, such sorts as Keiffer's Hybrid, it is quite as necessary to plant other varieties near it for the same purpose. Twyford Monarch, Howell, Duchess de Angouleme, and Beurre Clairgeau are sorts that will do.

## Directions for Planting.

After your ground is ploughed, measure off the required distances that you intend to plant your trees apart. Dig the holes a good three feet wide and five to six inches deep—**no more**—with the centre of the hole fully two inches higher than the edges. Put in about a kerosene tin of rotten manure, then plant your tree—with the strongest roots the side from which the strongest winds blow; spread the roots out to their fullest extent, and see that none are twisted in the hole. Fill in with loose earth, and tramp firmly around them.

---

## Directions for Pruning.

**Trees Just Out of Nursery Bed.**—Apples, Pears, Plums, Cherries, Quinces, Prunes, cut back to four or five buds from where they were cut back last, always leaving the end bud on the outside.

**Two Years and After.**—Cut out to one or two limbs on each that was cut back last year. Cut from a quarter to one-half the wood back according to the strength of the last season's wood. Do not cut the short spurs off, as they are fruit spurs—if not this year's they are the groundwork for future years.

**Explanation of Second Year Pruning.**—If your tree has four limbs when it comes from the nursery, it will probably have ten or twelve the second year, which would be too many to leave, so cut the two longest side shoots away on some and only one on others, taking care to leave the second one when another limb is desired.

It is a pleasure for us to send them one if you  
will let us know.

# To Plant-Lovers.

---

It is a pleasure to be able to satisfy our customers' needs, so if at any time you wish to get

## Shrubs, Plants, Roses, Seeds, &c.,

we will gladly supply them, and at the same prices that you would be charged elsewhere. Ask for our Price Lists.

We do not wish to make profit on these, as your interests are our interests, and our aim is to see our customers satisfied, because we firmly believe that

### *A Satisfied Customer is our Best Advertisement.*

We only send out the best of seeds, and take every possible care to protect our customers, but it must be borne in mind that we give no warranty as to description, quality, or productiveness, and we accept no responsibility in regard to the crop, or failure of the crop, there being too many causes, known and unknown, which prevent good seeds from germinating, and it is only under these conditions that all seeds are sold. If the purchaser does not accept the seeds on these terms, they must be returned at once.

#### PLEASE NOTE!

We receive Testimonials from all over the Commonwealth, not only of the trees themselves, but in appreciation of our care in packing, &c., Customers expressing their approval of the condition in which the trees have reached them.

## ALMONDS.

## Helpful Remarks to the Planter.

**T**OO many kinds of varieties of fruit are being grown and planted these days for commercial purposes, and for home use, and our idea is to reduce the numbers of kinds formerly grown—cutting right out many inferior kinds. In the case of amateurs, who find it difficult indeed to make a selection from a list containing usually more colored descriptions than that particular variety deserves; again, on the other hand, good kinds do not carry such a glowing description—consequently the amateur unacquainted with the different kinds doesn't make such a good selection as otherwise would be the case if the list were narrowed down to better kinds, and these inferior ones, many of them not worth garden room, cut out of existence, and will not appear in future issues of our Catalog.

## Insect Pests and their Remedies.

A few hints will not be out of place, especially for the amateur, who is unacquainted with the various pests and their remedies.

**Black Spot.**—As its name denotes, a black spot on the fruit and leaves; the fruit is what concerns us the most. Apples and Pears are subjected to this particular disease, especially in rainy, steamy weather.

Spray with Bordeaux Mixture (6 lbs. Copper Soda, 4 lbs. Unslaked Lime, 22 gallons of water), Copper Soda, or Lime Sulphur, when the blossoms are bursting; about 14 days later another application will do no harm. Weather conditions govern how many times it is necessary to spray—warm, dry weather, one application is usually all that is required, just as the buds are bursting.

**Codlin Moth.**—Attacks the fruit of the Apple and Pear. There are instances of the grub attacking Quinces and Plums, but this is not a generally recognised habit.

Spray with Arsenate of Lead when fruit is about the size of a pea, about 3 lbs to 50 gals. of water, 4½ lbs to 80 gals of water. Continue spraying at intervals of three weeks or one month—according to the weather—warm weather the eggs hatch more frequently. About four applications throughout the season is usually ample. Our experience has been to spray about second week in November, just before Xmas, again end of January, end of February for the later kinds, and again early in March, if necessary, for the late kinds. Still, one has to study their own particular district, where these particular times may be too late or too early.

**Leaf Curl.**—On Peach and Nectarines, leaves affected. 3 lb. Bluestone in 80 gallons of water before buds move; 1 gallon of Lime Sulphur to 50 gallons of water when trees are in bloom.

**Peach Aphis.**—Attacks Peach, Nectarines, and in some instances Japanese Plum.

Spray with Kerosene Emulsion (1 to 15 gallons water), Tobacco Water (soakings from tobacco stems), Red Oil (3 gallons to 80 gallons). Apply as buds are beginning to swell.

**Pear Slug.**—Attacks Pears, Plums, Cherries and Quinces. This pest is easily kept under with an application of 2 lbs. Arsenate Lead to 50 gallons of water. Spray on first appearance of slug.

**Woolly Aphis.**—Limbs and branches of the Apples; spray when trees are dormant, with Red Oil, 3½ in 80. Crude Petroleum is another good remedy. Tobacco wash may be used when leaves are out with no danger of damaging them.

**Shot Hole.**—In the Apricot. Spray with Bordeaux Mixture (as used for Black Spot), as buds are opening. When fruit has set, Lime Sulphur (1 gallon in 40 gallons of water) may be used with safety.

Any of the above Mixtures may be had in small or large quantities, on application to JOHN BRUNNING & SONS.

# THESE NOTES

are written for the purpose of giving Fruitgrowers, especially beginners, the benefit of years of practical experience in planting for market and export. The best varieties to keep, too, are the well-known varieties that you see quoted in England and elsewhere.

The varieties we would recommend are for export purposes.

*Granny Smith*  
*Cleopatra or New York Pippin*  
*Five Crown or London Pippin*  
*Jonathan*  
*Munroe's Favourite*  
*Reinette du Canada*  
*Esopus Spitzenburg*  
*Rymer*  
*Rome Beauty*  
*Sturmer Pippin*  
*Delicious*  
*King David*

It is not much use planting sorts that are not known, as they will not bring the prices of well-known sorts.
